History of ASSA, Incorporated

ASSA was established in 1881 by the blacksmith August Stenman after buying a small hinge manufacturer in the town of Eskilstuna, Sweden. One day his wife embroidered a pillow slip with his name forwards and backwards – “August Stenman, Stenman August,” and so ASSA became the name of the new company. By 1939, ASSA had produced its first cylinder lock and delivered its first 5-pin cylinder master key system seven years later. In 1959, ASSA introduced its first registered key systems with key control. In 1981, ASSA celebrated its 100th anniversary as a company with the release of the ASSA Twin 6000 system, a new cylinder concept utilizing the dual locking mechanisms of today's ASSA High Security cylinders.

In 1984 ASSA entered the North American market by establishing ASSA, Inc. in Naperville, IL as a marketing arm of ASSA AB in Sweden. ASSA, Inc. was a full line manufacturer of mortise locks, padlocks, auxiliary locks, and high security key systems. Starting in 1992, ASSA, Inc. shifted its sales direction from independent dealer sales to institutional, industrial, and government sales and began focusing its product offering on the retrofit and replacement high security cylinder segment. With the introduction of its new master keying capabilities ASSA became the logical choice for institutions around the United States and Canada offering patent protected, unique geographically exclusive keyways for ASSA authorized security centers and end users.

In 1994 ASSA, Inc. became part of the ASSA ABLOY Group which was formed through the merger of ASSA AB in Sweden and Abloy Oy in Finland. Headquartered in Stockholm, ASSA ABLOY has grown from a regional company into an international group with around 43,000 employees, sales of about \$7 billion and operations in over 70 countries. ASSA ABLOY offers a more complete range of door opening solutions than any other company on the market and remains dedicated to satisfying end-user needs for security, safety and convenience. In the fast-growing electromechanical security segment, the Group has a leading position in areas such as access control, identification technology, entrance automation and hotel security.

By 1996, ASSA had cemented several partnerships with detention equipment manufacturers gaining a significant presence in the corrections market both in North and South America. In 2000 ASSA, Inc. opened its doors to a new 5,000 square foot facility in New Haven, CT increasing its production capabilities with state of the art machinery and assembly equipment.

In 2001, ASSA launched the ASSA CLIQ, a technological platform for intelligent cylinders – the first joint development project in ASSA ABLOY. In the same year, ASSA ABLOY participates in the Volvo Ocean Race, dramatically increasing awareness of the company among millions worldwide.

Great advancements in electronics are a common theme in the first decade of the new century. Released in 2013, the ASSA CLIQ Remote system was developed with a focus on the customer's remote security, administration and bottom line. The innovative ASSA CLIQ Remote is yet another example of why ASSA continues to be the world's leader in high security and patented key control solutions.

High Security Key Control Programs

ASSA makes profile and sidebar combinations (keyway) available to locksmith/dealers, end users, wholesale distributors, and original equipment manufacturers (OEM) on a geographically exclusive basis. These programs are designed to meet the security requirements of virtually any customer by allowing them to essentially “own” their own keyway in a contractually defined geographic territory.

Locksmith/Dealer Program

The locksmith/dealer contracts with a wholesale distributor to have exclusive rights to sell the keyway in the defined territory. The locksmith must purchase all restricted components (key blanks, cut keys, sidebars, complete and sub-assembled cylinders and factory generated key charts) from the distributor named on the written agreement.

Types of Exclusivity

Locally Exclusive – Distributor establishes multiple locksmith/dealers selling the same keyway in a metropolitan area or state/province.

Regionally Exclusive – Distributor establishes a sole locksmith/dealer for a large territory such as entire or multiple states/provinces.

Nationally Exclusive – Distributor establishes a sole locksmith/dealer for an entire country.

End User Program

The institutional End User contracts with ASSA, Inc. to have an exclusive keyway established in a defined territory for its use only. The End User can purchase restricted products (key blanks, cut keys, sidebars, complete and sub-assembled cylinders and factory generated key charts) from any authorized distributor with written authorization from an authorized signatory specified in the written agreement.

Types of Exclusivity

Regionally Exclusive – ASSA establishes an End User keyway for a large territory such as entire or multiple states/provinces.

Nationally Exclusive – ASSA establishes an End User keyway for an entire country.

Continently/Global Exclusive – ASSA establishes an End User keyway for an entire continent or for global exclusivity.

Wholesale Distributor Program

The Wholesale Distributor contracts with ASSA to have exclusive rights to sell a specified “house” keyway in the defined territory. Distributors are allowed to sell this keyway to any customer as they see fit within the territory specified in the written agreement. The Distributor is also allowed to stock other keyways as necessary to service their locksmith/dealer base.

Types of Exclusivity

Regionally Exclusive – ASSA establishes a Distributor keyway for a large territory such as entire or multiple states/provinces.

Nationally Exclusive – ASSA establishes a Distributor keyway for an entire country.

ASSA ABLOY

Original Equipment Manufacturer (OEM) Program

The OEM contracts with ASSA to have exclusive rights to distribute a specified keyway through installation of the restricted products (key blanks, cut keys, sidebars, complete and sub-assembled cylinders and factory generated key charts) in their product as a component part or as a supplemental product for sale.

Types of Exclusivity

Regionally Exclusive – ASSA establishes an OEM keyway for a large territory such as entire or multiple states/provinces.

Nationally Exclusive – ASSA establishes an OEM keyway for an entire country.

Continentially/Global Exclusive – ASSA establishes an OEM keyway for an entire continent or for global exclusivity.

Keyway Information

Each key control program utilizes a standard cylinder plug profile (broaching). Various sidebar codes are combined with the profile to create different unique keyways. Twin 6000 key blanks produced after August 1988 are stamped with the complete keyway code including both side code and profile, e.g. 507-51. All other series (except C4/CLIQ and CLIQ Remote) will typically only include the side code designation. Please include side code and profile (if applicable) when ordering key blanks and cylinders, except SNS cylinders (See Cylinder form below).

Cylinder Form

ASSA High Security locks are available in three different forms. When ordering cylinders, please be sure to indicate Cylinder Form.

COMP (Complete) – Fully keyed cylinder. Master keyed, keyed different, and keyed alike items include two cut keys per cylinder.

SUB (Sub-assembled) – Uncombined cylinder includes sidebar mechanism, but no tumbler pins, springs or key blanks. Pin chamber closure strip, plug and screws provided.

SNS (Sub-assembled, No sidebar) – Uncombined cylinder without sidebar and sidebar springs. Includes side pins, side pin springs, standard tailpiece items and pin chamber closure strip.

Note: The SNS option is not available for 600, Twin Low, and Maximum+ Restricted Series cylinders.

Master Keying

ASSA locks and cylinders may be master keyed to meet virtually any requirement. Contact ASSA Key Records Department to discuss special needs.

Finishes

Standard finishes (shown right). Cylinder plugs and LFIC shells are only available in 626/US26D Satin Chrome and 606/US4 Satin Brass. Antique brass (609) is available for deadbolts only.

Note: See specific product sections of catalog to view available finish options for that product.

ASSA BHMA Symbol	Equivalent U.S. Symbol	Finish Description
625	US 26	Bright Chrome
626	US 26D	Satin Chrome
605	US 3	Bright Brass
606	US 4	Satin Brass
609	US 5	Antique Brass
624	US 10B	Dark Oxidized
612	US 10	Satin Bronze

Special Function Cylinders

ASSA offers two special function cylinders most commonly used in the Detention market. One is a directional cylinder, which is operated bi-directionally by one key and in one direction only (clockwise or counterclockwise) by a subordinate key. This special function is accomplished by a modification to the cylinder plug. The necessity for this product is clear; to provide functionality in the system design. However, due to the physical modification of the plug when used in a master key system, the potential size of the master key system will be reduced.

The second special function is a limited rotation cylinder. This cylinder requires two modifications and will be used in conjunction with a directional function. One key will operate bi-directionally and only one direction (clockwise or counter-clockwise) by a subordinate key stopping at a pre-determined position prior to 180°. These modifications will greatly reduce the potential of a master key system. It is essential to indicate all special function cylinders in the initial master key system design. Otherwise they may not be possible as part of the master key system.

Special function cylinders are offered in limited models and are noted by symbol: † indicating the model number is available in special functions.

How to order

Example	Model No.	Finish	Profile – Side Bar
Specify	E8551CW-14	626	851 – 888 (For Directional Cylinders Clockwise Rotation)
	E8551CC-14	626	851 – 888 (For Directional Cylinders Counter Clockwise Rotation)
	E8551CL-14	626	851 – 888 (For Limited Rotation Cylinders Counter Clockwise Rotation)
	E8551WL-14	626	851 – 888 (For Limited Rotation Cylinders Clockwise Rotation)

Red Core

ASSA provides Red temporary construction cores (red cores are always 51 Profile) for its interchangeable core cylinders upon request. Red cores are invoiced at list price noted in current price list and upon return to ASSA, credit will be issued for the full invoiced amount less a handling fee (See current price list). Request for credit must be made in writing to ASSA Customer Service referencing the original invoice upon which the red cores appear. KEYS ARE NOT INCLUDED IN THE PRICE OF THE RED CORE AND ARE NOT ELIGIBLE FOR RETURN.

To order interchangeable core cylinders with temporary cores, specify cylinder model number, Cam, finish, by RED CORE, example, 6552ICR-1 x 626 x RED CORE. To order red core separately, specify 70600ICR. Specify change keys as TWIN-KD-RED and control keys as TWIN-CT-RED.

ASSA High Security Key Systems

Twin 6000 Classic – The Twin 6000 Series, released in 1981, was ASSA’s first key system to employ patented dual independent locking mechanisms providing optimum pick resistance and key control. Marketed to both the locksmith and end user markets, the Twin 6000 allowed the user to “own” their own private key section. The Twin 6000 remains immensely popular with lock professionals for its ease of service, very large master key system yield, and the rugged durability of the key. The Twin 6000 was the first ASSA key system to earn the Underwriter’s Laboratory 437 rating, a series of tests designed to measure a cylinder’s resistance to picking, pulling, drilling, and forcing attacks.

Twin V-10 – With the introduction of the Twin V-10 system in 1996, ASSA brought to market a new patented key and cylinder design that helped to eliminate unauthorized duplicate keys and maintain a key control system unmatched in the industry. The very narrow keyway was designed to stop picking tools from easily entering the cylinder. Multiple pitched side pins allowed the master key system yield to be expanded dramatically thus offering the possibility of having more than a million locks keyed differently operated by a single master key.

Twin Exclusive – In 2000, ASSA introduced the Twin Exclusive, a patent-protected upgrade to the highly successful Twin 6000 series. Utilizing the same dual locking mechanism, the Twin Exclusive built on the original design and allowed one key to work both cylinders.

Twin Pro – Introduced to the North American market in 2003, the Twin Pro high security key control system was developed for large institutional end users and ASSA Certified Service Centers. The Twin Pro is not stocked by our traditional wholesale distributors and is shipped directly from our factory to the end user or service center thus eliminating the possibility of the system being compromised. ASSA offers training for facilities with in-house locksmiths to service these locks or they can be serviced by an ASSA Certified Service Center.

C4/CLIQ – The ASSA C4/CLIQ electro-mechanical key system was released to the North American market in 2004. Concept 4 (C4) is an intelligent lock system that combines the best of mechanical key and cylinder design and electronics in the smartest possible manner. The CLIQ™ technology was developed through the collaboration of several ASSA ABLOY companies in Europe and has blossomed into the most innovative electro-mechanical key and cylinder system on the market today. The unique design provides a high security key and cylinder combination with an added electronic access control feature that requires no power source of any kind at the door opening. Power is supplied by a standard lithium battery installed in the key thus eliminating the need for hard wiring at the opening. Every time a key is inserted into a cylinder the transaction and its result are recorded with a time and date stamp and stored in both the key and cylinder enabling the user to monitor access to any area including those for which supplying power to the opening would be impractical or impossible.

Twin Maximum – The Twin Maximum product line introduced in 2005 was set up to interface with the ASSA C4/CLIQ system. It is the mechanical keyway utilized by the C4 and allows the possibility of combining mechanical keys and cylinders with the CLIQ™ technology in the same master key system. The Twin Maximum uses multiple pitched side pins like the Twin V-10 giving the potential for extremely large master key systems.

Maximum+ – The Maximum+ product line, launched in 2013, features the most sophisticated, state of the art mechanical locking technology on the market today. Utilizing our trademarked Security Ridge™ on the key, the Maximum+ system offers a level of patented protection unmatched by industry standards. The Maximum+ carries a utility patent that extends until 2029 and is backward compatible with our Twin Maximum product enabling one key to operate both cylinders. All Maximum+ products can be fully integrated with the ASSA CLIQ electromechanical access control system ensuring full key holder accountability for virtually any opening. The ASSA Maximum+ and CLIQ combination is designed to provide maximum flexibility while maintaining the highest standards of physical security and access control.

Maximum+ Restricted – A patent restricted key system providing legal protection over unauthorized key duplication to 2029. This system is offered for interior use because it does not have the added cost of UL 437 physical protections of the Maximum+ system. Maximum+ Restricted provides a cost competitive solution where the risk of physical attack on cylinders is relatively low.

CLIQ Remote – Released in 2013, the ASSA CLIQ Remote system was developed with a focus on the customer's remote security, administration and bottom line. CLIQ Remote is aimed at customers who need to change authorizations relatively often, but need mechanical security. The system is designed with the advantages of both access control and mechanical key systems, which makes it suitable for geographically scattered businesses. CLIQ Remote makes it possible to give one person — regardless of location, anywhere in the world — remote access to a building. It also offers the option to decide the time of day an issued key will start and stop working, as well as in which doors. All ASSA CLIQ Remote electromechanical keys systems can be fully integrated with both Maximum Plus and Twin Maximum mechanical systems for maximum flexibility.

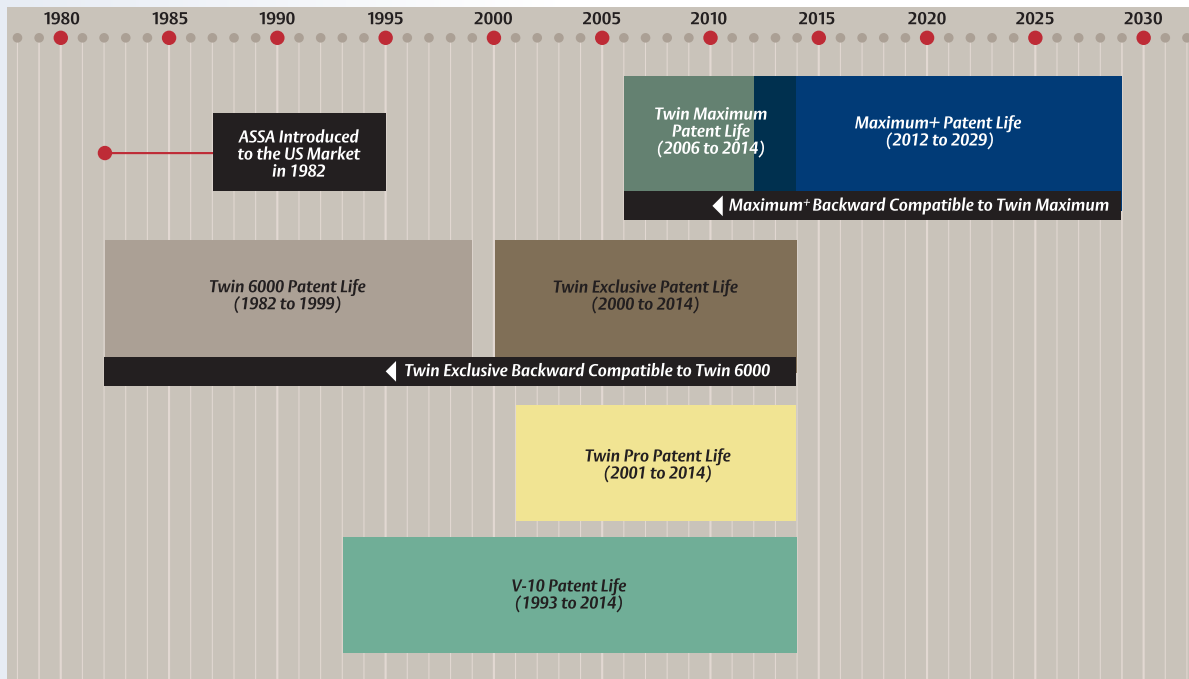

ASSA Medium Security Key Systems

600 Series – The ASSA 600 Series incorporates many of the security and performance features of the High Security systems but does not have a sidebar or side pins. Keys are made of high quality nickel silver and cylinders provide a superior level of pick resistance. The 600 Series is a stand alone key system and is available in five profiles (keyways).

Twin Low – The Twin Low product line of cylinders is available in some of the Twin 6000 Classic profiles but without the restricted sidebar component. This product offers a lower cost alternative for interior and less sensitive openings affording the key holder the convenience of operating 3 levels of security (Twin Exclusive, Twin 6000 Classic, and Twin Low) with the same key.

500/700 Series – One of the oldest key systems still supported by ASSA, the 500/700 Series product was developed in the early 20th century. The 500 Series key uses a 5 pin tumbler system while the 700 Series uses 7 pins. ASSA, Inc. no longer supports cylinder or cylinder parts sales for this product series however key blanks in all existing profiles are available by special order.

High Security Key System

General requirements:

1. Provide a high security key system capable of integrating various type of lock cylinders; mogul, builder hardware, and auxiliary locks, into a patented, geographically restricted, factory master keyed system to allow control over the entire facility.
 - a. Include detention mogul cylinders, builders hardware cylinders, auxiliary locks, and padlocks keyed into one compatible system for locks specified in this section and those specified in related sections.
 - b. Proprietary Keyway: Provide written guarantee from the manufacturer that the Keyway used on this project is for the exclusive use of the Owner on a regional basis..
2. Master Keying
 - a. Provide level 3 grandmaster key system. As defined in (DHI) "Keying Systems and Nomenclature".
 - b. Provide factory established key system and keying of cylinders.
 - 1). Arrange for manufacturer to maintain permanent key identification and registration records.
3. Keys
 - a. Replacement Keys: Available only from the manufacturer upon written authorization from the Owner.
 - b. Stamping of Keys: Stamp keys with an identification code in accordance with "Keying Procedures, Systems, and Nomenclature" published by DHI.
 - c. Quantity:
 - 1) Change keys:
 - a. Allow for four (4) change keys per lock cylinder.
 - b. Furnish a minimum of six (6) keys per key set, remaining keys as instructed by the Owner.
 - 2) Master level keys:
 - a. Furnish a minimum of ten (10) of each masterkey and six (6) of each master level key above the grandmaster.
 - b. Material: Nickel silver alloy.
 - c. Minimum size: 1" x 3" long 1/8" thick.
4. Cylinders
 - a. Marking of Cylinders: Using a black indelible ink pen, mark body of cylinders with an identification code in accordance with "Keying Procedures, Systems, and Nomenclature" published by DHI.
 - b. Standard compliance
 - 1) Listed under UL 437.
 - 2) ANSI/BHMA A156.30 standard for High Security Cylinders.
 - 3) ASTM 1577 6.6 standards for Correctional Cylinders.
5. Temporary Construction Security
 - a. Provide temporary construction cylinders and keys for exterior doors, automatically locking doors where security is required, and doors to rooms used for storage.
 - 1) Temporary cylinders and keys remain the property of the contractor.
 - b. Provide temporary blank strike plates for lock bolt receivers to prevent automatic locking of doors where temporary construction cylinders are not used and security at the door during construction is not required.

The ASSA C4 CLIQ system is fully compatible with the Maximum+ and Twin Maximum mechanical key systems allowing the flexibility and convenience of one key operating both electronic and mechanical locks in the same master key system.

The electronic programming of the keys gives authorization to individuals while providing the possibility of instantly blocking lost or stolen keys in locks electronically. Power is supplied by a standard lithium battery installed in the key thus eliminating the need for hard wiring at the opening.

Every time a key is inserted into a cylinder the transaction and its result are recorded with a time and date stamp and stored in both the key and cylinder. All keys feature a quartz clock which can restrict access to openings for certain days or times. Using a software program called ASSA Performer the user is easily able to make changes in locks and keys with special programming keys. Performer can be deployed on a single computer or on a network for use in a client/server application. The ASSA CLIQ technology utilizes high security encryption for transferring data that complies with DES protocol.

Benefits:

- Installation Without Wiring at the Opening
- Audit Trail with Time and Date Stamp
- Extremely Large Master Key Systems
- DES Encrypted
- Cost Effectiveness
- Wide Range of Retrofit Cylinder Shapes
- Same Key Operates both Mechanical and Electronic Lock

Functionality:

- Battery Life 2 Years or 20K Openings
- HID Prox Chip Option

Warranty:

- 2 Years on Electronics
- ASSA warrants against key breakage under normal use

Certification:

- Patented Key Control
- Operating Temperatures: -40° F to 130° F

Technical Information:

- Power Supply is Provided by the Key
- Data Transfer 64 Bit and Higher
- Water Resistant
- Sealed Electronics
- No Wires

Technical Specs.

The ASSA CLIQ Remote takes the C4 CLIQ concept to a new level by making it possible to give one person, regardless of location, anywhere in the world, the ability to remotely grant or deny access to an opening for a specific period, day or time.

Administrators can make all daily changes to users' access rights without ever needing to have the keys physically or visit the opening. The web-based application CLIQ Web Manager links users with one or more remote programming devices strategically

located where users frequently pass such as the staff entrance. All user keys feature a quartz clock making it possible to control the user's authorization during selected times. You can specify both a start and a stop time when a key will have access to a particular opening. Keys can be enabled to work on multiple schedules for different openings.

Employing an optional feature known as revalidation, a user key can be set to expire at regular intervals requiring that the user revalidate the key for current access permissions. Revalidation limits the liability of a lost or stolen key by blocking any future updates. For example, if keys are set to expire every 24 hours, the user must access a remote programming device in order to get new authorization for the next interval. In the event of a lost or stolen user key the electronic authorization can simply be blocked and the key becomes useless.

All ASSA CLIQ Remote electromechanical keys systems can be fully integrated with both Maximum+ and Twin Maximum mechanical systems for maximum flexibility. CLIQ Remote helps you to take a total solution approach to key administration, regardless of facility placement or size, saving both time and money.

Benefits:

- Installation Without Wiring at the Opening
- Access Rights Updated Remotely
- User Key Revalidation
- Multiple Time Schedules
- Audit Trail with Time and Date Stamp
- Extreme Master Keying Capacity
- Cost Effectiveness
- Wide Range of Retrofit Cylinder Shapes

- Same Key Operates both Mechanical and Electronic Lock
- DES Encrypted

All ASSA keys are manufactured from the highest quality nickel silver material. The key's rounded back facilitates smooth operation and minimizes wear. The large key bow simplifies identification and use by manually impaired people.

Available in several profiles ASSA high security keys all feature a unique side milling on the lower portion of the key blade which is precut at the ASSA factory. Each side milling represents a proprietary key section that is factory controlled on a geographic basis providing an unmatched level of patented key control.

Benefits:

- Two sets of key cuts designed to operate independent locking mechanisms
- Innovative key design protected by U.S. and international patents
- Patented key control offers the ultimate in high security
- Top cuts can be generated on standard, quality code cutting equipment
- ASSA's generous keying capabilities allow over 160,000 change keys under a single master key

Certification:

- Maximum+ key listed under U.S. Patent number 8,205,473

Warranty:

- ASSA warrants that if a key should break under normal usage, ASSA will replace it at no charge
- ASSA warrants that no other top level master key for any other ASSA factory generated master key system will operate as a top level key in an end-user's system for a specified geographic territory
- ASSA's patented key systems are legally protected against unauthorized key duplication

Technical Information:

- High quality nickel silver material
 - Key combination is read from tip to bow
 - No. 1 cut is deepest, No. 9 is shallowest
 - Maximum adjacent cut is 5 (example: 1-6 is acceptable, 1-7, 8 or 9 is not)
 - Cut depth is measured as root depth from back of key to bottom of cut
- Special stamping and custom coining available*

ASSA 700 Series Key Blanks

Item No.	Description
462001	Key blanks/ specify profile

Master Key Order Procedure:

Master key system orders for ASSA products are processed using proprietary software. This allows us to import the customer order data when it is submitted to us in the compatible format described below on a diskette or via E-mail. **All ASSA factory master key systems must be submitted electronically in this format.**

Excel File Format:

The format of an Excel file which we can import is shown below. The first row in the file should number the columns 1 through 14, the file should not contain headers or formulas.

Column	Content	Character Limit
1	Item #	4
2	Cyl. Quan.	4
3	Cyl/Cam PN	12
4	Finish	5
5	Column Unused	Column Unused
6	Keyset	12
7	Key Quan.	4
8	Door #	12
9	Comments	20
10	Spl. Key stamp	12 (For stamping other than DHI or SKCS standard)
11	Column Unused	Column Unused
12	Column Unused	Column Unused
13	Column Unused	Column Unused
14	Cross Keying Info	20

ASSA ABLOY

Excel File Format *(continued)*:

The import of an Excel format file offers a special feature regarding systems which incorporate a ENG key. If a particular item is to be operated by the ENG key in addition to the other key indicated by the keyset you can indicate this to our software by adding a suffix of “-E” to the keyset. In such a case AA1 would become AA1-E if it should be operated by the ENG key. This specification option is not available if the imported file is supplied in ASCII format.

In order to ensure that correct master keying information is received and accurate records are maintained, ASSA has designed an Order Log Template. The following is an example of a completed sample order log:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	Item#	Cyl.Qty	Cyl/Cam Part#	Finish	None	Keyset	Key.Qty	Door # (Location)	Comments	Spl. Key Stamp	None	None	None	Cross-keying info
2	1	2	3	4	5	6	7	8	9	10	11	12	13	14
3	1	1	98611	13		AA1	2	12 - 125						
4	2	1	98611	13		AA2	2	12 - 126						
5	3	1	98611	13		AA3	2	12 - 177						
6	4	3	98611	13		AA4	2	12 - 178						
7	5	1	98611	13		XAA5	2	12 - 179		M01				OpBy A;AA;AA6;AA7;AA8
8	6	1	98611	13		AA6	2	12 - 180						

The template for the order log file that must be submitted with all factory master keyed orders can be found on our web site at http://www.assalock.com/en/site/assalock_com/Resources.

When filling out the key quantity column, the quantity of keys entered on the line will be the total number of keys supplied for that line. This field cannot be left blank. **Even if no keys are required a zero must be entered.**

In the example above, item 4 has 3 cylinders and 2 keys specified.

The total number of keys to be supplied for this line is 2.

The Order Log Template is also available by contacting your local ASSA sales representative or ASSA Customer Service. If a computer or the Excel program is not available to you, contact your local ASSA sales representative for assistance in getting the form completed. The completed form along with the formal written purchase order is then e-mailed to ASSA Customer Service at email address Assaorders@assalock.com.

The ASSA Key Records Department carefully designs and records master key systems in compliance with customer requirements and ASSA security policy. System documents are thoroughly detailed, produced, and professionally presented, and should be considered valuable and confidential. Key Records information and service is available as follows:

Factory Keyed Cylinders:

Cylinders pinned by the factory are supplied “Keyed Different” or if so specified as one of the following options:

- Master Keyed (Bitings provided at No Charge when requested with the order)
- Keyed Alike/Keyed Different
- Single Keyed Different (Part of MK System)

**Factory does not recommend cross-keying
and will not warranty any cross-keyed cylinders.**

ASSA mortise cylinders are designed to replace several original manufacturers' cylinders in their locksets offering the highest level of security available on the market today. Made to standard U.S. dimensions, these rugged cylinders are available in a variety of finishes and lengths and stand up to even the heaviest abuse. All ASSA High Security mortise cylinders are listed under U.L. 437, a set of tests for determining the cylinder's physical resistance against various forms of attack. ASSA mortise cylinders will improve the security of standard mortise locksets by Arrow, Corbin/Russwin, Sargent, Schlage, Yale and many other manufacturers.

Benefits:

- Drill resistant cylinder housing and plug
- Case-hardened steel inserts and stainless steel pins
- Two independent locking mechanisms to ensure optimum pick resistance
- Inactive "false" gates in side pins designed to increase pick resistance
- Counter mill in each chamber position to further enhance pick resistance
- Extremely close tolerances
- Can be easily rekeyed in the field
- With the purchase of one inexpensive kit, 1-1/8" mortise cylinder is easily converted to rim cylinder

Certification:

- All ASSA High Security Mortise cylinders are U.L. 437 Listed

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Technical Information:

- Available in cylinder lengths 1-1/8" through 2" in 1/8" increments
- Available with limited rotation and/or unidirectional features
- 13 cam options available
- Cylinder housing and plug are made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Finishes:

Pin Kits Tools & Accessories

Care & Maint.

Technical Specs.

No key inserted:

- Standard pins block the shear line
- Side bar rests in groove of cylinder housing, blocking movement of plug

Correct key inserted:

- System code of key lifts standard pins to shear line
- Side bar code of key lifts side pins into a position where the side bar can be received. Side bar then recesses into plug as key is turned

Commonly used on apartment and condominium doors, ASSA rim cylinders are used on vertical deadbolt locks and are also designed for commercial exit and panic devices. Available with either horizontal/vertical break-off or lazy-motion type break-off tailpieces, ASSA rim cylinders can be ordered with the standard or the Sargent rim exit device mounting patterns. The standard rim cylinder can be easily converted to a mortise cylinder by simply replacing the rim tailpiece assembly with the appropriate cam.

Benefits:

- Drill resistant cylinder housing and plug
- Case-hardened steel inserts and stainless steel pins
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive “false” gates in side pins designed to increase pick resistance
- Counter mill in each chamber position to further enhance pick resistance
- Extremely close tolerances
- Can be easily rekeyed in the field
- Standard and Sargent hole pattern available
- Standard rim cylinder is easily converted to mortise cylinder

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Certification:

- All ASSA High Security Rim cylinders are U.L. 437 Listed

Technical Information:

- Available with limited rotation and/or unidirectional features
- Cylinder housing and plug are made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Rim Cylinder mounting plates, screws included with cylinder.
All items available separately below:

Part No.	Description
900210.....	Rim cylinder mounting plate
900211.....	Rim cylinder mounting screws
900209.....	Kit, includes plate and 2 screws
900212.....	Rim cylinder collar rings (Finish 605, 624 & 626 ONLY)
867450.....	Horizontal & Vertical Rim Tailpiece Kit, includes 900209 Kit
867451.....	Lazy Motion Rim Tailpiece Kit, includes 900209 Kit

Aluminum blocking rings, finish 626 or 624 **ONLY**

Part No.	Thickness
900219.....	1/4"
900220.....	3/8"
900221.....	1/2"

Adjustable collar ring, Item No. 900222,
finish 626,605 or 624 **ONLY**.

Hardened collar ring, Item No. 900223,
finish 626 or 624 **ONLY**.

Corbin Jumbo Collar, Item No. 900224,
finish 626, **ONLY**.

ASSA Mogul cylinders are designed to provide the maximum level of security and durability. Available for Folger Adam, AirTeq/Norment, R.R. Brink, Sargent, and Southern Steel detention locksets, the ASSA Mogul is the smart choice for today's corrections industry. A hardened cover plate and hardened steel inserts in the cylinder shell provide protection against even the most savage and determined forms of physical attack.

Benefits:

- Hardened plug cover plate to prevent drill attack
- Case-hardened steel inserts and stainless steel pins
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive "false" grooves on side pins designed to enhance pick resistance
- Counter mill in each chamber position to further enhance pick resistance
- Extremely close tolerances
- Can be easily rekeyed in the field

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Certification:

- All ASSA Twin Series Mogul cylinders are U.L. 437 listed as well as ASTM F 1577 6.6 Certified for standard test methods for Detention Locks

Technical Information:

- Available in 1-1/8" and 1-1/2" lengths
- Available with limited rotation and/or unidirectional features
- Cylinder housing and plug are made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Finishes:

Designed with both security and convenience in mind, the ASSA Large Format Interchangeable core cylinder is perfect for apartment buildings, dormitories, classrooms, and other applications requiring instant rekeying capabilities. This cylinder is adaptable to a variety of large format interchangeable core applications and can be integrated into master keyed systems that use both standard and interchangeable core cylinders. Available in standard ASSA format, large format Schlage, Yale 6 pin, Sargent 6 pin, and Corbin-Russwin 6 pin formats. Only ASSA format Interchangeable core cylinders are listed under U.L. 437.

Benefits:

- Easily rekeyed openings in the field
- Can be used in master key system with standard locks
- Available in multiple manufacturers' formats
- Drill resistant cylinder housing and plug
- Case-hardened steel inserts and stainless steel pins
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive "false" gates in side pins designed to increase pick resistance
- Counter mill in each chamber position to further enhance pick resistance

Technical Information:

- Available for 1-1/4" and 1-3/4" mortise and rim cylinders
- Build-up pins in first four positions operate control feature
- Cylinder housing and interchangeable core are made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Certification:

- Only ASSA format Interchangeable core cylinders are listed under U.L. 437

Finishes IC Mortise Cylinder Housings Only:

* – Indicates Finished Components.

ASSA Key in Knob/Key in Lever cylinders are designed to replace many original manufacturers' cylinders in their locksets including Arrow, Corbin/Russwin, Falcon, Sargent, Schlage, Yale and many other manufacturers thus offering the highest level of security available on the market today.

Benefits:

- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive "false" gates in side pins designed to increase pick resistance
- Counter mill in each chamber position to further enhance pick resistance
- Extremely close tolerances
- Can be easily rekeyed in the field
- Patented key control

Finishes:

BHMA Symbol	U.S. Symbol	Description
626	US 26D	Satin Chrome
606	US 4	Satin Brass

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Certification:

- All ASSA Key-in-Knob/Lever cylinders are U.L. 437 listed

Technical Information:

- Available in 15 different retrofit assemblies
- Cylinder shell and plug made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

ASSA ABLOY

The ASSA 6000 Series deadbolt is designed to withstand any form of physical attack including drilling, prying, driving, or pulling. Its free spinning guard collars protect it from pipe wrenching while its hardened inserts guard against drilling. The 6000 comes equipped with the ASSA Hardhat™ to protect it from outside through-the-door attacks known as “ice picking.” All ASSA 6000 Series deadbolts are available with interchangeable core and feature our unique dual locking mechanism rendering them virtually pick proof.

Benefits:

- ASSA Hardhat™ to prevent physical attack
- Free spinning guard collars to prevent wrenching
- Available in interchangeable core
- High security solid brass cylinders
- 1/4" Aircraft strength steel mounting bolts
- Hardened bolt with full 1" throw
- Non-handed

Warranty:

- ASSA warrants its cylinders and deadbolts against defective workmanship or wear resulting from defects for one year

Certification:

- All ASSA 6000 Deadbolts are U.L. 437 Listed

Technical Information:

- Cylinder shell and plug made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Finishes:

ASSA's auxiliary lock line brings the same level of key control and durability to cam locks, window locks, drawer and desk locks are standard for all of our high security products. All of our auxiliary locks are operated by the same 6 pin uniquely side coded keys as the rest of our high security line eliminating the need for maintaining separate key systems.

Benefits:

- All locks operated by same high security key
- Unlimited number of applications
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive "false" gates in side pins designed to increase pick resistance
- Can be easily rekeyed in the field

Technical Information:

- Cylinder housing and plug made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Technical Specs.

ASSA manufactures the most rugged high security cam locks on the market today. The sturdy design makes it perfect for inner safe doors and compartments, cash storage containers, drug carts, gun cabinets, alarm control panels, and key storage cabinets. ASSA cam locks are operated with the same ASSA 6 pin high security key as the rest of our product offering and are available in both key retaining and non-key retaining models.

Benefits:

- Operated by 6 pin high security key
- Available in key retaining and non-key retaining
- 31 different catches available
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive “false” gates in side pins designed to increase pick resistance

Technical Information:

- Installation prep 22 mm, 7/8" Double "D" (punch available from ASSA)
- Uses stainless steel hollow interchangeable core drivers
- Body and plug chromium plated brass
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

ASSA Utility Locks are used to secure sliding glass or wood doors, storage cabinets, and windows. They can be keyed into any ASSA key system or used as a stand alone locking device. The body is finished with baked on white enamel. This assembly locks with just one push of your thumb or finger, as easy as locking a file cabinet. The Utility Lock comes with all of its own mounting hardware for standard wood frame applications and shims for uneven surfaces.

Benefits:

- 6 pin high security cylinder
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive “false” gates in side pins designed to increase pick resistance

Technical Information:

- Cast aluminum housing
- Cast aluminum rim and mortise strike
- Cylinder body and plug high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Combining state of the art Securitron designed technology with the versatility of an ASSA non key retaining cam lock, this switch lock is fully reversible from maintained to momentary.

Benefits:

- Choice of actuation (plunger as well as a variety of integral and auxiliary actuators)
- Choice of electrical termination (solder, quick connect, PCB)
- Available with standard or narrow stile mounting plate with LED

Technical Information:

- Single pull double throw (SPDT) pin actuator and solder termination standard
- 3 amp at 12 or 24 VDC
- Uses stainless steel hollow interchangeable core drivers
- Body and plug chromium plated brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

ASMKS2	DPDT Momentary
ASMKS2A	DPDT Alternate (ON/OFF)

ASSA manufactures high security padlocks in three classes, all of which can be integrated into any new or existing ASSA master key system. Our heavy duty padlocks are made from the highest quality materials and have withstood the most rigorous testing procedures. ASSA padlocks are used in a wide variety of applications including storage rooms, perimeter fences, and armories.

Benefits:

- Sturdy design ensures maximum durability
- Class 2 available in key retaining and non-key retaining, extended shackle
- Shackle made of rust resistant case hardened steel
- Hockey Puck style shackleless design provides maximum protection against hacksaw and bolt cutter attacks
- Drain holes to prevent freezing
- No external screws or rivets

Technical Information:

- Class 2 body extruded brass, rust resistant case hardened steel shackle, tensile strength 1.5 tons. (Class 2 not recommended for exterior use)
- Class 2 convertible from key retaining to non-key retaining
- Class 3 body case hardened steel, rust resistant case hardened steel shackle, tensile strength 4.5 tons
- Hockey Puck style body can withstand up to 10,000 lbs of force from bolt cutters
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its cylinders against defective workmanship or wear resulting from defects for one year

Certification:

- All ASSA High Security Padlocks are U.L. 437 listed

Technical Specs.

ASSA manufactures a variety of European cylinders including the Scandinavian oval and the Euro Din (M20 Series). Available for different door thicknesses and featuring a cam actuator, ASSA Euro Din cylinders can be used with many types of imported locksets and specialty hardware. All European cylinders can be keyed into any new or existing ASSA key system.

Benefits:

- Retrofits variety of European applications
- Two independent locking mechanisms to ensure security and optimum pick resistance
- Inactive "false" grooves on side pins designed to increase pick resistance

Technical Information:

- M20 Series available for different door thicknesses
- Cylinder housing and plug made of high quality brass
- Stainless steel top pins
- Bottom pins and master pins are nickel silver

Warranty:

- ASSA warrants its products against defective workmanship or wear resulting from defects for one year

Finishes:

Guideline for M20 EURO accessories
Location of lock cases, cylinders and accessories

1. Specification of M20 Cylinder/turn and accessories.
 - a) Measure the door thickness (A).
 - b) Measure the distance between the centre of the lock case and the security side of the door (B).
 - c) Measure the distance between the centre of the lock case and the inside of the door (C).
 - d) Add the thickness of the cylinder accessories to the B and C measurement. The result will be the length of the cylinder/turn.

Table Measurement

Code	Length mm
A	+0
B	+5
C	+10
D	+15
E	+20
F	+25
G	+30
H	+35
I	+40
J	+45
K	+50
L	+55

ASSA products are the highest quality cylinder products on the market today. The following information for maintaining proper condition of your ASSA cylinders and keys will insure the best performance for you and your clients.

Make sure that all key cutting equipment is properly calibrated in accordance to ASSA manufacturer specification. This is the first consideration in the proper performance of ASSA cylinders. Regularly inspect keys in use and replace any keys that show physical wear immediately.

ASSA cylinders are mechanical devices and like any mechanical device they need regular preventive maintenance. At the time of installation cylinders must be lubricated with ASSA approved lubricant. ASSA recommends part #807718-ASSA Lock Spray Lubricant. Wipe off any excess lubricant on exposed surfaces. Cleaning and lubricating the lock mechanism that the ASSA cylinder is being installed into is important as well. ASSA cylinders should be lubricated at least twice a year as normal maintenance.

- **Do not use graphite or silicone lubricants. Use only ASSA approved lubricants.**
- **Do not expose ASSA cylinders to chemical wash.**
- **Do not paint any cylinder surfaces.**

Do not over lubricate ASSA cylinders. If you suspect cylinder has been over lubricated or suspect excessive dirt or other particles or debris, thoroughly flush with ASSA cleaner de-icer or use an alcohol base electrical contact cleaner that leaves no residue. Let dry or dry with compressed air then re-lubricate with ASSA approved lubricant.

Basic Cylinder Assembly

Step One. Invert the cylinder plug and place the side pin springs in the side pin holes. Insert the side pins.

NOTE! The side pins are all identical. It is imperative that the springs locate correctly or the cylinder will malfunction.

Step Two. With the cylinder still inverted, insert a key with the correct side code to hold the side pins in place.

Step Three. Position the short sidebar springs at each end of the sidebar slot.

NOTE! It is imperative that the springs are located in the prepared holes.

Step Four. Lay the sidebar in the slot so that the fences correspond to the opening gates in the side pins. It should now be possible to press the sidebar down in its slot so that it is flush with the outer face of the cylinder plug.

NOTE! The key should remain in the cylinder plug during this operation.

Step Five. Place the cylinder plug in the cylinder house. If the sidebar is fitted correctly, the cylinder plug can now be turned within the shell. Hold the cylinder plug in place when withdrawing the key.

Step Six. Fit the tailpiece and secure.

Note: Cylinder plug diameter is .510".

- A. 0.8mm (0.032") wide flat base.
- B. 90° cutting angle.
- C. The six top cut positions are counted from tip to bow at nine depths of cut.
- D. The five side cut positions are counted from tip to bow at five depths of cut and are restricted to factory production only.

The chart below only references top cut spacing.

Measurement	P1	P2	P3	P4	P5	P6
mm	25.7	21.9	18.1	14.3	10.5	6.7
Inch	1.0118	0.8622	0.7126	0.5630	0.4134	0.2638
Tolerance	+0.02 / -0.03mm +0.0008 / -0.0012					

General Rules

The cut depth should be measured from the back of the key to the bottom of the cut.

Spacing is calculated from the shoulder of the key.

The key combinations are cut from the tip of the key towards the bow.

The system code must be cut at 90° cutting angle and a 0.8mm (0.032") wide flat base.

No.1 cut is deepest cut, no. 9 is shallowest.

Maximum Adjacent Cut Specification (MACS) = 5.

Example: 1 cut adjacent to 6 cut is acceptable.
1 cut adjacent to 7, 8, or 9 cut NOT acceptable.

Depths: Key Combinations		
Normal depths for key combinations		
Depths:	mm	Inch
N0. 1	4.03	0.1587
N0. 2	4.63	0.1823
N0. 3	5.23	0.2059
N0. 4	5.83	0.2295
N0. 5	6.43	0.2531
N0. 6	7.03	0.2768
N0. 7	7.63	0.3004
N0. 8	8.23	0.3240
N0. 9	8.83	0.3476
Measure from back of key to bottom of cut		
Tolerance	+ 0.00 - 0.04mm	
	+0.00" - .0016"	

ASSA ABLOY

Ordering:

When ordering key blanks, the profile and geographically assigned code must be stated.

A. Side bar Code is cut at ASSA Factory only. Key blanks are provided as shown.

B. Side bar code/profile can be identified on key bow. Example: for Twin 6000 Series, 51-599; there are 5 different profiles in the ASSA Twin 6000 Series which are; 50, 51, 52, 61, and 62.

Key Stamping:

All new key blanks and cut keys will be stamped as original from factory in accordance with assigned keyway.

Maximum+
Profile 0A7

Twin Maximum
Profile 0M7

Twin Pro
Profile 0P4

Twin Exclusive
Profile 851

Twin 6000
Profiles

Twin V-10
Profile 95

Key Cutting:

Key combination can be cut on many code machines and duplicating machines. Code cutting machines historically, produce better keys than Key-duplicating machines. The ASSA key is a quality key. ASSA recommends quality cutters. ASSA supplies cutting wheels for the HPC 1200 CM and Code Max code machine as well as cutters, vises, and cams for Framon KX1.

ASSA Recommended Code Machines:

- ASSA PS-6000T (Made by Framon)
- Any Framon Machine designed to cut ASSA Twin and Max+ Series keys
- Silca Ultra Code
- HPC Code Max
- ITL 9000 Series Code Machines

ASSA Twin Series Pinning

The same bottom and master pins used in all ASSA Twin Series, Maximum+, and 600 Series product are made of high-quality nickel silver. The deepest cut on a Twin Series and Maximum+ key is the #1 length and the shallowest is the #9 length. This makes the #1 pin the longest and the #9 pin the shortest. All pins are 0.114" in diameter.

Bottom Pin Part Numbers & Lengths		
Pin Size	Part Number	Length
#1	867078	0.3503"
#2	867079	0.3267"
#3	867080	0.3031"
#4	867081	0.2795"
#5	867082	0.2559"
#6	867083	0.2322"
#7	867084	0.2086"
#8	867085	0.1850"
#9	867086	0.1614"

Pins for ASSA cylinders do not taper to a ball nose radius like most pin tumbler pins, but have a flat tip that is 0.020" in diameter. This provides more reliable contact between tumbler and key.

Master Pin Part Numbers & Lengths		
Pin Size	Part Number	Length
#1	867070	0.0236"
#2	867071	0.0472"
#3	867072	0.0708"
#4	867073	0.0944"
#5	867074	0.1181"
#6	867075	0.1417"
#7	867076	0.1652"
#8	867077	0.1889"

ASSA Twin master pins are engineered for single step \masterkeying, creating the largest master key capabilities of any pin tumbler lock in production.

By numbering from the smallest to the largest, pinning may easily be calculated by subtracting the master pin number from the bottom pin number. (i.e. 7 - 3 = 4. A #3 master pin with a #7 bottom pin is the same physical length as a #4 bottom pin alone.) If the master pin (or pins) leave a remainder of less than one when subtracted from the bottom pin, the overall stack height of the chamber is wrong.

Pin Kits Tools & Accessories

Care & Maint.

Technical Specs.

Top Pin Part Numbers & Uses		
Driver	Part Number	Stack Height
A	807261	1 or 2
B	807262	3 or 4
C	807263	5 or 6
D	807264	7 or 8 or 9

Example: When using a #4 bottom pin, a B top pin (driver) is required for proper stack height in the chamber. A #7 bottom pin and a #3 master pin would also require a B top pin.

Top Pins/Spool Drivers	
Height	Width
A – 4 mm/0.15 inch	2.9 mm/0.114 inch
B – 5 mm/0.19 inch	2.9 mm/0.114 inch
C – 6 mm/0.23 inch	2.9 mm/0.114 inch
D – 7 mm/0.27 inch	2.9 mm/0.114 inch

KIK & KIL cylinders measuring 1.020" in the CH dimension listed in the product section will use a modified pin stack. This is done by calculating the required top pin and then using one size smaller in the cylinder, i.e. using an A top pin instead of a B in the above example. If the shortest top pin (A) needs to be shortened, a #5 master pin should be substituted. The #5 master pin is one increment step shorter than the A top pin.

Twin 6000 & Twin Exclusive Side Pin
Left hand & right hand Twin V-10 side pins flanking a side view.

Twin Pro Side pin drawing on the left shows the back of the Twin Pro side pin and its lift point.

Twin Maximum and Maximum+ side pins are available in left or right hand similar to V-10.

Like the Twin Pro side pin, the Twin Maximum and Maximum+ side pins are lifted at the bottom of the centering tab.

There are six different types of side pins used in ASSA High Security Twin Series and Maximum+ cylinders. The Twin 6000 and Twin Exclusive use one type of side pin with two false grooves above and below the opening gate.

Twin Series and Maximum+ Series side pins are lifted by the side cut on the key blank to a proper height to match the fence pattern on the geographically controlled side bar.

There are two different Twin V-10 side pins, left or right hand. Four false side grooves are provided for pick resistance. The Twin V-10 side pin has an eccentric shape and must be properly positioned before insertion in the side pin chamber of the plug. Left and right hand side pins offer the flexibility to utilize multiplexing capabilities.

The Twin Pro side pin is similar to the design of the Twin V-10 but there is only one type for all five side pin positions. This side pin design is lifted at the back of the pin rather than the bottom surface.

Twin Maximum and Maximum+ side pins are available in left and right hand offering the flexibility of multiplexing similar to Twin V-10. The ASSA Twin Maximum and Maximum+ series cylinder is the mechanical platform that is integrated by C4 CLIQ and CLIQ Remote electromechanical keys and cylinders.

Side Bar Operation

There are five side pins in every ASSA Twin and Maximum+ Series cylinder. In the Twin 6000 and Twin Exclusive, there is only the one type of side pin and for the Twin V-10 Series there are left-hand and right-hand side pins. ASSA Twin Pro has yet another single type of side pin. For Twin Maximum and Maximum+ there are left- and right-hand side pins similar to Twin V-10 for multiplexing capability

The actual side code combination is machined into the side bar itself and again on the side cut of the Twin Series and Maximum+ key.

The purpose of the side pins is to align the opening gate by the side-cut milled on the side of the key that will align the side pin with the coded side bar fence. If they match, then the side bar will be unlocked.

With five depths in each position and five positions on each side bar, there are 3,125 different side codes possible. ASSA has 2,805 available. ASSA Twin side codes are assigned to dealers, distributors and end-users on a restricted geographical basis.

ASSA refers to the sidecode as an “intelligent” keyway that is unique to the market area of each dealer and end-user. The sidecode assures ultimate key control while the technicians have total control of the keying and pinning.

ASSA sidebars are reversible. Each sidebar is assigned with two matching key blanks, the obverse and reverse side codes. Twin V-10, Twin Maximum, and Maximum+ operations are capable of additional key blanks, and these capabilities are assigned only by and from the factory.

Note: Plug diameter is .510".

ASSA Master Keying Capability

ASSA offers single step progression master key systems. Unlike most standard progression systems that are restricted to two step progression, industry standards require a minimum of .023" from one step increments to the next for all lock manufacturers in order to prevent unwanted interchange in master key systems.

Considering ASSA's high tolerance and approximate 0.024" step increments, its nine depths of cut in six positions offers considerably more theoretic and usable combinations than any other lock manufacturer on the market today.

Figure 1

TMK	2	5	8	3	6	9
	4	7	0	5	8	1
K	6	9	2	7	0	3
B	8	1	4	9	2	5
A	0	3	6	1	4	7
64 pages				64 changes per page		

Figure 1 shows a standard two step progression chart. If the last three columns are progressed, the theoretic total change keys under a single master key would be 64 change keys on a page. If the first three columns were then progressed, there would be 64 pages for a total of 4,096 theoretic change keys under a single master key. If we were to consider that there is a MACS of 7, this system would yield approximately 3,000 usable change key combinations.

Figure 2

TMK	1	2	6	9	5	8
	2	3	7	1	6	9
	3	4	8	2	7	1
K	4	5	9	3	8	2
B	5	6	1	4	9	3
A	6	7	2	5	1	4
	7	8	3	6	2	5
	8	9	4	7	3	6
	9	1	5	8	4	7

Figure 2 shows ASSA's single step progression chart. If we were to progress only the last two columns, we would get a theoretic total of 64 change keys on a page. If we then progressed the two center columns, we would then get a theoretic total of 64 pages. So you see, we have already matched the total 4,096 theoretic change keys in the first exercise from Figure 1, but only four of our six chambers have been progressed. Now let's progress the first two columns to get 64 volumes, of 64 pages, of 64 changes per page. This gives us a theoretic total of 262,144 change keys under a single master key. With a MACS of 5 we typically lose about one half of our theoretic total, still yielding about 130,000 and in some cases as many as 160,000 usable change key combinations under a single master key, on each of our 1,402 available reversible sidebars.

Calculating Pin Stacks

Always choose the bottom pin, in a given chamber, by comparing the cuts in that chamber. Always select the highest number for the bottom pin since that would be the shortest possible pin. Next, subtract the remaining cut to obtain the master pin needed. The driver pins are calculated by subtracting the master pins from the bottom pins, chamber by chamber. In the case of stacked master pins always total the master pins then subtract that number from the bottom pin.

Example:

AA - 495599	AB - 495499	AC - 495699
AA1 - 495524	AB1 - 495464	AC1 - 495625
AA2 - 495536	AB2 - 495438	AC2 - 495644
AA3 - 495562	AB3 - 495426	AC3 - 495637

The following would describe typical pinning arrangements for bottom, master and driver pins from our sample systems.

495799	"AA" Key	495799	"GMK" Key
495327	"1AA" Key	495599	"AA" Key
		495536	"AA2" Key
495799	Bottom Pins	495799	Bottom Pin
--472	Master Pins	--263	Master Pins
BDCBAD	Top Pins	BDCCBC	Top Pins

ASSA C-4 CLIQ & CLIQ Remote

The ASSA CLIQ technology is designed with the advantages of both electronic access control and mechanical key systems making it suitable for organizations spread over wide geographic areas. The ASSA CLIQ features time schedule access control, the ability to grant or deny authorizations electronically and provide an audit trail. This unique technology provides a high security key and cylinder combination requiring no power source of any kind at the opening.

For more detailed information please see pages 6 & 7 or visit our website www.assalock.com and select the "Products" tab.

Considerations for Master Key System design

There is a black power and data transfer strip inserted alongside the CLIQ electromechanical keys as part of the electronics. When designing a masterkey system where CLIQ will be used there is a cut depth restriction in the sixth position. A number one or two depth of cut can not be used so that the black power and data strip is not damaged when cutting the key. Clamping the key into a the vice jaw of a key duplicating or code cutting machine will also damage the black power and data transfer strip. CLIQ keys, are always cut at the factory.

Servicing ASSA CLIQ cylinders

The ASSA CLIQ electronic components, Motor and actuator are sealed in the cylinder plug and are not field serviceable. All ASSA CLIQ cylinders are keyed at the factory.

Lubrication

The only approved lubricant is the ASSA Lock Spray part number 807718.

The ASSA Lock Spray is conductive and the formula resists collection of dust and dirt. Any other lubricant used can mask the contact read for power and data transfer.

A motor drives the electromechanical blocking element that locks the side rail.

ASSA Large Format Interchangeable Core, ASSA Yale & ASSA Corbin Russwin LFIC

With the discontinuation of the ASSA removable core (RC) product, in 1996 ASSA introduced a new Large Format Interchangeable core (LFIC) product which may be mounted in the same figure eight housing as the old product.

The new LFIC product is designed to be compatible with systems written for the old product and may even safely be supplied as expansion in some key systems not originally designed with the RC or LFIC product in mind.

VALUES

C =	Control Bitting	CK =	Change Key Bitting
BP =	Bottom Pin	MK =	Master Key Bitting
MP =	Master Pin		
BUP =	Build-up Pin		
TP =	Top Pin		
Stack =	20		

This LFIC has a control "sleeve" in the first four pin chambers and pinning for those chambers is calculated using specific formulas to determine the two top components of the pin stack. The TOP PIN (TP) is determined from the control KEY combination, simply add one to the bitting of the control key in the first four positions to determine the size of the top pin for the corresponding pin chamber.

$$TP = C + 1$$

The sizes of the BOTTOM PIN (BP) and MASTER PIN (MP) are determined using the normal method. The only other component in the stack is the buildup pin and the following formula will give you the correct size to use in the pin chamber.

Master Keyed

$$BP = \text{MAX} (CK/MK)$$

$$MP = \text{ABS} (CK-MK)$$

$$TP = C + 1$$

$$BUP = 20 - \{TP + [10 - (BP-MP)]\}$$

Non-Master Keyed

$$BP = CK$$

$$MP = 0$$

$$TP = C + 1$$

$$BUP = 20 - [TP + (10-CK)]$$

If the particular chamber is cross keyed, it will have more than one master pin in it and the formula should be modified to reflect that condition. The pinning for the last two pin chambers should be calculated in the same manner used for ASSA non-IC products.

Using the formula isn't any more difficult than adding and subtracting. The example here is for a master keyed LFIC cylinder, and this formula will apply to the first four pin chambers only. As with all formulas, it should be worked from the inside out. Our keys for this cylinder are:

<u>CTRL</u>	<u>216499</u>
AA	495799
1AA	642799

ASSA ABLOY

The Top Pin is calculated as CTRL Bitting + 1, in this case.

Pin Chamber 1	Pin Chamber 2	Pin Chamber 3	Pin Chamber 4
CTRL Bitting 2 + 1 = 3 TP	CTRL Bitting 1 + 1 = 2 TP	CTRL Bitting 6 + 1 = 7 TP	CTRL Bitting 4 + 1 = 5

The only pin size we don't now know is the BUP (Build-up Pin). The formula will tell us that.

$$BUP = 20 - \{ TP + [10 - (BP - MP)] \}$$

Pin Chamber 1	Pin Chamber 2	Pin Chamber 3	Pin Chamber 4
$BUP = 20 - \{ 3 + [10 - (6 - 2)] \}$	$BUP = 20 - \{ 2 + [10 - (9 - 5)] \}$	$BUP = 20 - \{ 7 + [10 - (5 - 3)] \}$	$BUP = 20 - \{ 5 + [10 - (7 - 0)] \}$
$BUP = 20 - \{ 3 + [10 - 4] \}$	$BUP = 20 - \{ 2 + [10 - 4] \}$	$BUP = 20 - \{ 7 + [10 - 2] \}$	$BUP = 20 - \{ 5 + [10 - 7] \}$
$BUP = 20 - \{ 3 + 6 \}$	$BUP = 20 - \{ 2 + 6 \}$	$BUP = 20 - \{ 7 + 8 \}$	$BUP = 20 - \{ 5 + 3 \}$
BUP=20-9	BUP=20-8	BUP=20-15	BUP=20-8
BUP=11	BUP=12	BUP=5	BUP=12

From this formula we know that the pinning of the cylinder would be:

TP	3	2	7	5	D	D
BUP	11	12	5	12	-	-
MP	2	5	3	-	-	-
BP	6	9	5	7	9	9

The build-up pin may be any size from 1 up to 17. As part of the product release we have created 9 new master pins for use as build-up pins. They are numbered 9 through 17. In conjunction with this product release ASSA has produced nine new top pins 2 through 10. These new top pins have a recess drilled into the top of them to accept the new, smaller diameter top pin spring which must be used in the first four control sleeve chambers of the cylinder.

If you are generating your own key systems, there are some new combination selection rules which should be followed for the TMK and the CTRL (Control Key).

- 1) The TMK should have a number 9 depth as one of the first four cut positions and the corresponding position in the CTRL key should be a number 1 depth.
- 2) The last two cut depths of the CTRL key should be the same as the TMK.

With the exception of the preceding rules, the other cut positions in the CTRL key may be any depth except the TMK depth. The combination used for the CTRL key should be removed from the key system if it is generated as part of the progression.

ASSA Sargent Large Format Interchangeable Core

Follow the same formula and rules as specified for the ASSA Large Format Interchangeable & Yale & Corbin Russwin LFIC but change the stack to 19.

IMPORTANT: If the build-up pin (BUP) is equal to 0 no build-up pin is used.

CTRL	216969
AA	495769
1AA	642169

The Top Pin is calculated as CTRL Bitting + 1, in this case.

Pin Chamber 1	Pin Chamber 2	Pin Chamber 3	Pin Chamber 4
CTRL Bitting 2 + 1 = 3 TP	CTRL Bitting 1 + 1 = 2 TP	CTRL Bitting 6 + 1 = 7 TP	CTRL Bitting 9 + 1 = 10
Pin Chamber 1	Pin Chamber 2	Pin Chamber 3	Pin Chamber 4
TP = 2 + 1 = 3	TP = 1 + 1 = 2	TP = 6 + 1 = 7	TP = 9 + 1 = 10

The only pin size we don't now know is the BUP (Build-up Pin). The formula will tell us that.

$$BUP = 19 - \{ TP + [10 - (BP - MP)] \}$$

Pin Chamber 1	Pin Chamber 2	Pin Chamber 3	Pin Chamber 4
$BUP = 19 - \{3 + [10 - (6 - 2)]\}$	$BUP = 19 - \{2 + [10 - (9 - 5)]\}$	$BUP = 19 - \{7 + [10 - (5 - 3)]\}$	$BUP = 19 - \{10 + [10 - (7 - 6)]\}$
$BUP = 19 - \{3 + [10 - 4]\}$	$BUP = 19 - \{2 + [10 - 4]\}$	$BUP = 19 - \{7 + [10 - 2]\}$	$BUP = 19 - \{10 + [10 - 1]\}$
$BUP = 19 - \{3 + 6\}$	$BUP = 19 - \{2 + 6\}$	$BUP = 19 - \{7 + 8\}$	$BUP = 19 - \{10 + 9\}$
$BUP = 19 - 9$	$BUP = 19 - 8$	$BUP = 19 - 15$	$BUP = 19 - 19$
$BUP = 10$	$BUP = 11$	$BUP = 4$	$BUP = 0$ (no BUP is used in this chamber)

From this formula we know that the pinning of the cylinder would be:

TP	3	2	7	10	C	D
BUP	10	11	4	-	-	-
MP	2	5	3	6	-	-
BP	6	9	5	7	6	9

The build-up pin may be any size from 1 up to 17. As part of the product release we have created 9 new master pins for use as build-up pins. They are numbered 9 through 17. In conjunction with this product release ASSA has produced nine new top pins 2 through 10. These new top pins have a recess drilled into the top of them to accept the new, smaller diameter driver spring which must be used in the first four control sleeve chambers of the cylinder.

If you are generating your own key systems, there are some new combination selection rules which should be followed for the TMK and the CTRL (Control Key).

- 1) The TMK should have a number 9 depth as one of the first four cut positions and the corresponding position in the CTRL key should be a number 1 depth.
- 2) The last two cut depths of the CTRL key should be the same as the TMK.

With the exception of the preceding rules, the other cut positions in the CTRL key may be any depth except the TMK depth. The combination used for the CTRL key should be removed from the key system if it is generated as part of the progression.

ASSA Sheering Tool for Sargent and Corbin Russwin LFIC Original Housings

Sargent 6 Pin LFIC

Corbin Russwin 6 Pin LFIC

The ASSA Sargent & Corbin Russwin retrofit LFIC cores require a sheering tool to cut the drive pin in existing Sargent or Corbin Russwin housings that is in line with the ASSA side bar. This simple and effective hand tool is inserted fully into the figure 8 opening of a Sargent or Corbin Russwin LFIC housing over both drive pins. The T handle is inserted into the large opening on the left and turned shearing the left drive pin to the proper length.

ASSA Schlage Removable Core

The Schlage removable core has a control sleeve in the first cut position at the ASSA key tip.

Only the number 8 or 9 depth of cut can be used for the operating keys.

The control key can be cut to the 1, 2, 3 or 4 depth of cut only, in the first position at the ASSA key tip.

A build-up pin, hollowed top pin, and an ASSA IC top pin spring is used in the first chamber position to engage the control sleeve and drive blocking pin to lock or unlock the core in the Schlage original housing.

No master pinning is allowed in the control chamber position. Positions 2 through 6 can be used for normal ASSA master pinning.

Calculating the loads is as follows:

The Top Pin is equal to the control cut plus 6

$$TP = CTRL + 6$$

The build-up pin is equal to the operating cut minus the control cut plus 2

$$BUP = 2 + (\text{Operating Cut} - \text{CTRL Cut})$$

Key Retained

Non-Key Retained

ASSA cam locks are serviced with standard Twin bottom and master pins. The tops pins, or drivers and springs used in ASSA cam locks are the hollowed top pins used in the ASSA Interchangeable Core product T-2 through T-9. The top pin used in each chamber is equal to the total operating stack. A #7 bottom pin uses a T-7 top pin. For master keying a #5 bottom pin – a #3 master pin equals a total operating stack of 2. The T-2 top pin is used. Due to stack height restrictions the #1 depth of cut cannot be used in ASSA cam locks.

- Top Pin #2 – 809328
- Top Pin #3 – 809329

Security Authorization Procedure

- Locksmith is encouraged to use the ASSA-343 form card shown below to register their customers signatures.
- Customer would then be required to sign an ASSA-312 form in order to receive additional cut keys for subsequent orders.
- Locksmith should check signature(s) on the ASSA-343 form registration card and verify that it matches the signature on the ASSA-312 form.
- Personal identification should also be requested for additional customer protection.

ASSA
ASSA ABLOY
SIGNATURE REGISTRATION CARD # _____

This card is to be used in conjunction with ASSA® restricted key systems. The names and corresponding signatures will establish individuals authorized to order additional cut keys and locks for specific key systems. In the event of a change in authorized personnel a letter must be submitted on company letterhead bearing the signature of one of the individuals stated below.

END USER	OWNERS NAME (Please type or print) _____	1	TYPE OR PRINT NAME _____	END USER
